

When the night changed, **the day moved**

A report on the first six weeks of the night-delivery pilot, for the transport board.

S U M M A R Y

Congestion fell six points; complaints **did not rise**

-6_{pts}

daytime congestion index

+2

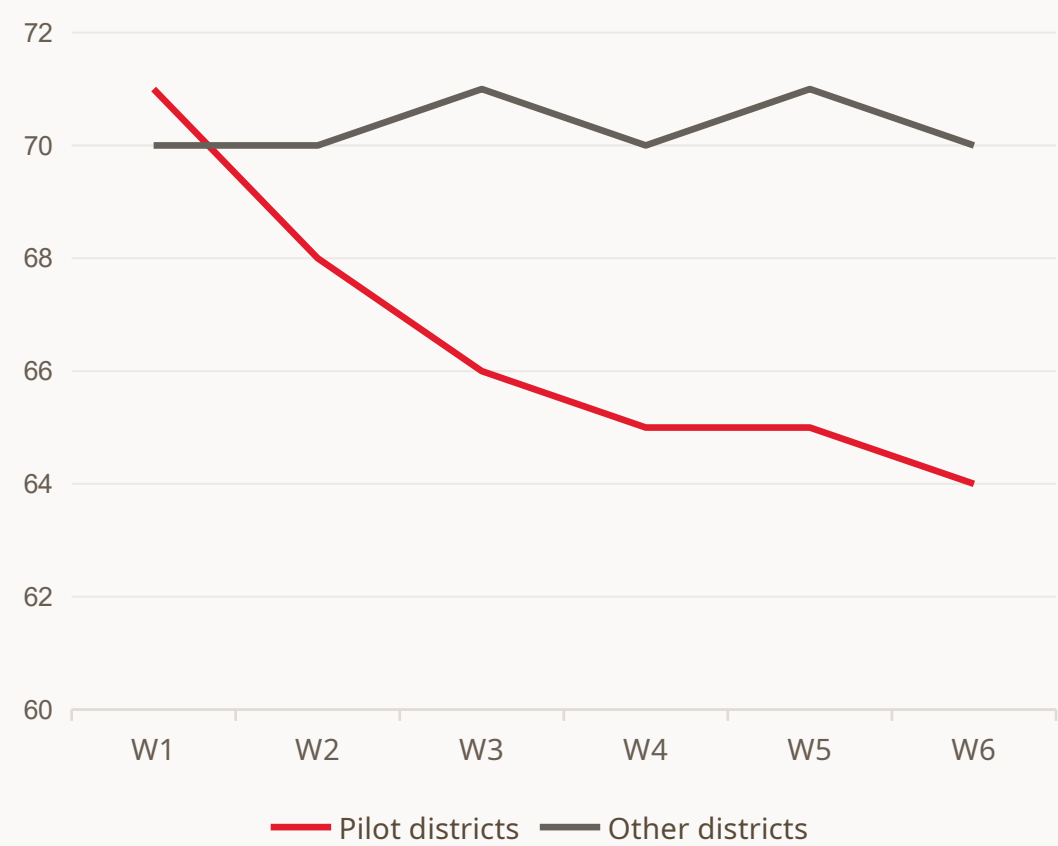

deliveries per van per day

0

added noise complaints

Source: city traffic office, pilot weeks 1–6 (illustrative figures)

The fall held for all six weeks, in every pilot district

Pilot districts

The index fell from 71 to 64 and did not bounce back after the first fortnight.

Other districts

Unchanged at about 70, which rules out a citywide seasonal dip.

Congestion index, weekday 07:00–19:00 average. Source: city traffic office (illustrative)

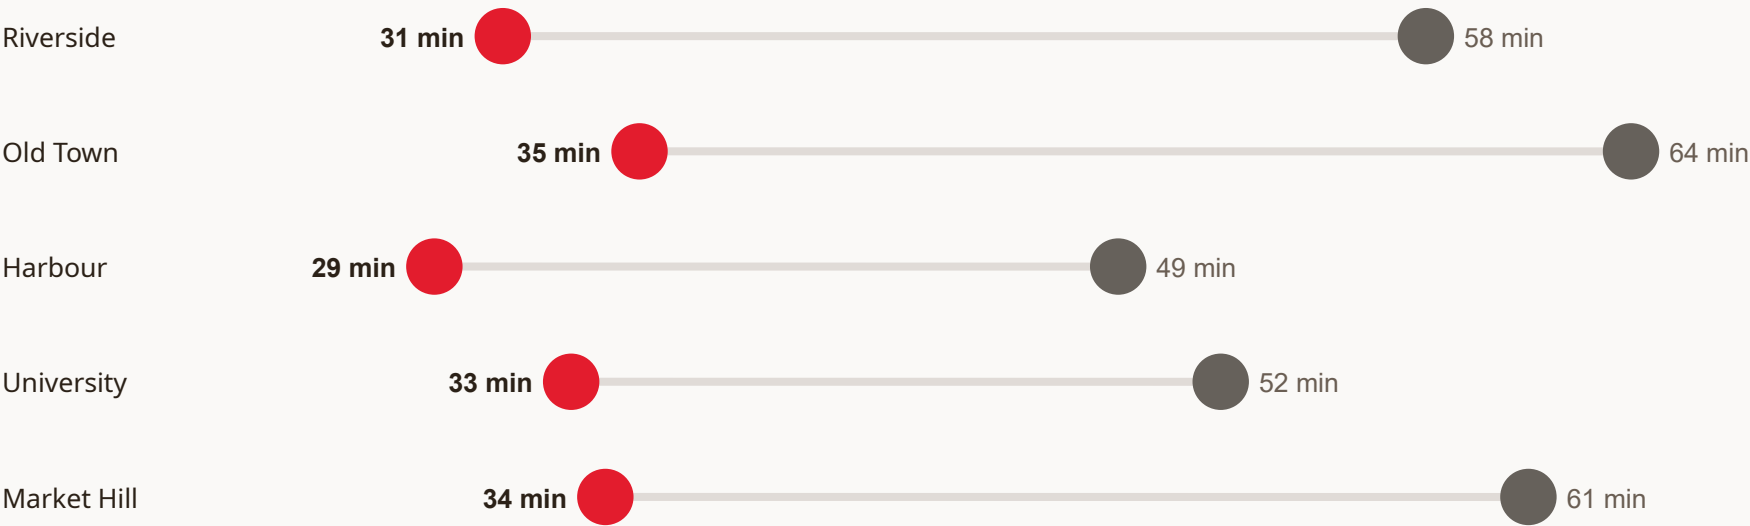

Drivers noticed first

“

At night the route takes me an hour. The same run in the afternoon took three.

— Delivery driver, Riverside district

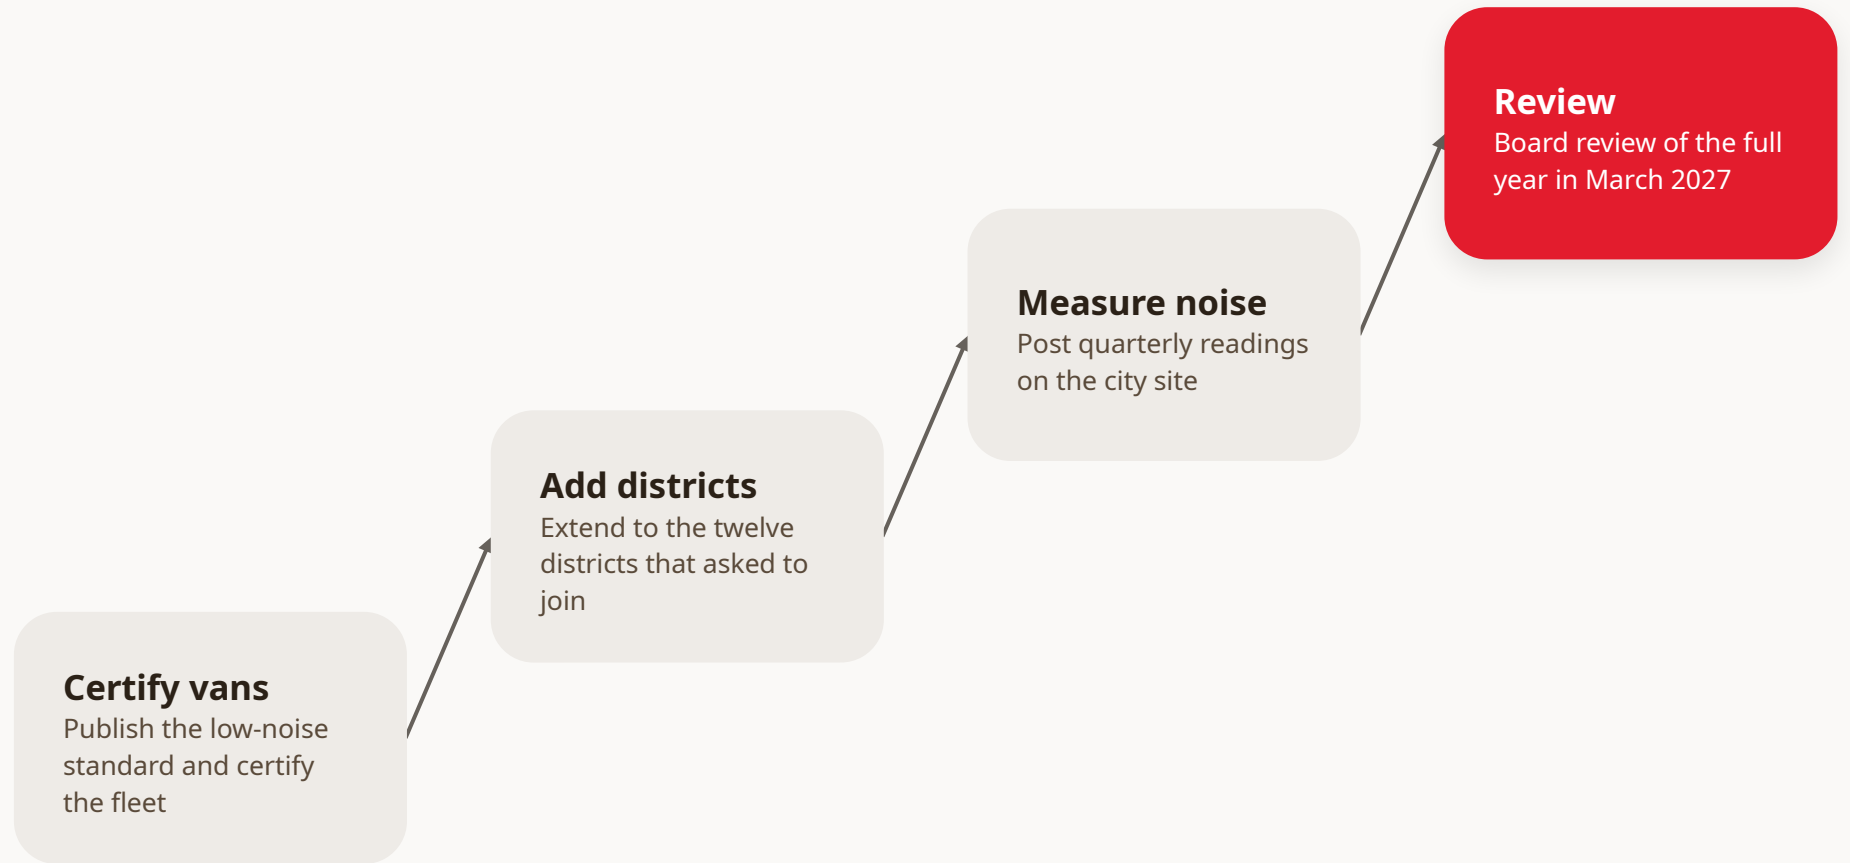

Night runs were faster in every district we measured

Grey dot: the day run. Red dot: the same route at night. The night run saved 20 to 29 minutes on a 20-drop route.

Median minutes per 20-drop route, pilot weeks 1–6 (illustrative)

Four steps take the pilot citywide by spring

Timeline as proposed in September 2026

THE DECISION

**We ask the board to extend
the pilot to every district**
